Colorado State University

2021 Flower Trial Garden

Purpose

The purpose of the flower trial garden is to evaluate the performance of flower varieties under our unique Rocky Mountain environmental conditions. Our growing conditions are characterized by high altitude, intense solar radiation, drying winds, severe hailstorms, large fluctuations between day and night temperatures, season-long need for irrigation and heavy clay soils. Plants are evaluated based on plant vigor, uniformity, floriferousness and tolerance to environmental and biotic stresses. Performances of these varieties are judged by selected students, faculty, industry representatives, public horticulturalists and advanced Master Gardeners. The report will be distributed at the end of the season to all participating companies. The trial results will also be available to the public online at www.flowertrials.colostate.edu.

We had twenty-two seed and vegetative companies participate in our twenty-seventh annual, industry-supported, bedding plant trials. The garden consists of approximately 1,100 different plant varieties this year. Plants are grown in either the sun or under our shade structure that provides about 60 to 70% shade. The plant companies are given the option to choose whether they want their varieties grown in a ground bed, a container or in both locations. Each trial entry in the ground is planted in 2 parallel rows of 9 plants per row for a maximum of 18 plants. Each 20" container is planted with 5 plants. A combination container is planted with 3 plants. There are 500 varieties planted in sun beds, 36 varieties planted in shade beds, 470 varieties planted in sun containers and 96 varieties planted in shade containers.

Participating Companies:

American Takii Inc.	JYK Seed Co.
Ameriseed	Kieft Seed Co.
Ball FloraPlant	PAC
Ball Ingenuity	PanAmerican Seed
Beekenkamp	Proven Winners
Benary+	Sakata Seed America Inc.
Danziger	Selecta One
Darwin Perennials	Suntory Flowers Limited
Dummen Orange	Syngenta
GardenChoice®	Terra Nova
Green-Fuse Botanicals	Westhoff Flowers

In Kind Donations:

Blackmore Inc. and Greencare Fertilizers - Donated water-soluble fertilizer for use in the garden and greenhouse.

ICL Specialty Fertilizer - Donated Osmocote® slow-release fertilizer used in the beds and containers.

Harrell's – Donated water soluble and slow-release fertilizers for containers.

Tagawas - Donated potting media used to grow-on vegetative plugs.

Organix - Donated organic media for sun beds and containers.

Welby Gardens - Grew all AAS seed plants at a substantially reduced cost for the trials.

Browns Greenhouse, Kiyota's Greenhouse, Dutch Heritage Gardens - Propagated plants at a substantially reduced cost for the trials.

Griffin- Donated small containers and flats.

In Appreciation

The Department of Horticulture and Landscape Architecture would like to recognize and thank the following people for making the trial gardens happen this year.

Sheila Prentice – Graduate Student and Annual Trial Garden Coordinator

The Trial Garden Staff – Sam Kelly, Courtney Dunbar, Tate Erickson

David Staats – Horticulture Research Associate

All the Larimer & Weld County Master Gardeners who volunteered their time and hard work.

Browns Greenhouse, Kiyota Greenhouse, Dutch Heritage Gardens, Welby Gardens, and all of their staff.

The Trial Garden Advisory Committee –Dan Gerace (Welby Gardens), Al Gerace (Welby Gardens), Diana Reavis (Eason Horticultural Resources Inc.), Duane Sinning (Colorado Department of Agriculture), Galen Dokter (Vaughan's Horticulture), Gene Pielin (Gulley Greenhouse), Jim Devereux (Green-Fuse Botanicals), Milan Clickingbeard (Tagawa Greenhouses), Karl Trellinger (Syngenta Flowers), Bridget Blomquist (Denver Botanic Gardens), Mark Seguin (Sakata Ornamentals), Ron Brum (Ball Horticultural Company), Amy Gonzales (Syngenta Flowers), Susan Stauber (Ball Horticultural Company), Traicer Gray (Elitch Gardens), Julie Lehman (Denver City Park Greenhouse), Richard Anderson (Lifescape Colorado), Diana Shull (Dummen Orange), Holly Shields (Denver City Parks), Steven Engel (PanAmerican Seed), Beth Gulley (Gulley Greenhouse), Kathy McKay (Flamingo Holland), Sean Moody (Ceres Landcare), Stephanie Guterrez (Designs By Stephanie), Ryan Giacomini (Brown's Greenhouse), Dale Kiyota (Kiyota Greenhouse), Aaron Biven (Altman Plants), John Navant (Highland Hills Park and Rec), Debra Pfaff (City of Broomfield), Shalene Hiller (City of Westminster), Emily Mason (Dummen Orange), Chris Berg (Dummen Orange), Aki Okamoto (Tagawa Greenhouses), Mandy Gerace (Syngenta Flowers), Nora Lozada (Flamingo Holland), David Hartley (CSU Emeritus), Scott Fulton (Botany Lane Greenhouse)

An Invitation

You are cordially invited to tour the garden at your leisure to enjoy the color and ambiance of a place that is like no other in Colorado. Any suggestions you may have for future programs or improvements are strongly encouraged, so please feel free to contact us with your ideas.

Jessica Davis – Department Head

Phone: (970) 491-7018

James E. Klett – Annual and Perennial Flower Trial Garden Faculty Coordinator

Phone: (970) 491-7179; Fax: (970) 491-7745; Cell Phone (970) 218-0104

E-mail: jim.klett@colostate.edu

2021 CULTURAL DATA

Growing

All seeds were sent to Brown's Greenhouse, Kiyota Greenhouse, and Dutch Heritage Gardens in January and February 2021 for germination and growing-on in their greenhouses into cell packs or 50-cell trays. Seeds were separated between the four greenhouses for germination but all varieties of the same genus were sent to one location. Seed varieties from these four companies were all received on June 7, 9 & 10 and planted in the garden starting on June 11. All vegetative varieties were received as plugs and transplanted into 4.5" pots shortly after arriving at Colorado State University from late March to mid-April.

Fertilization in Greenhouses*

Dosatron® fertilizer injectors rated at 7 GPM were used in the greenhouses to fertilize plants each day they were watered, with the exception that every weekend they were watered with clear water. Greencare 14-4-14 water soluble fertilizer was used. Plants were grown in the greenhouses at the CSU Horticulture Center. They received fertilization at a rate of 200 ppm.

Chemicals Used in Greenhouses

A drench of Banrot® (6 oz/gallon) was applied to all vegetative plugs immediately after arrival and prior to potting up as a preventative fungicide treatment.

This year there were some minor pest issues in the greenhouse. Mainspring® was applied as a treatment for white flies and aphids on 4/15 and 5/7. Marathon® II was applied as a treatment for aphids on 4/22. Safari® was applied as a treatment for aphids and thrips on 6/4 and 6/21. Flagship® was applied as a treatment for aphids and thrips on 6/25.

An early shipment of two varieties of seed petunias lead to vigorous growth, so B-Nine® was applied as a growth regulator to these varieties on May 3rd.

Soil Amendments and Preparation

All beds were raked clean of old mulch, planting material and weeds prior to planting. Where necessary, RoundUp® was sprayed on weeds. Prior to planting, 1.5-2" of new Grower's Mix media from Organix Supply Inc. was added to all sun beds. The beds were roto-tilled to a depth of 8" which helped incorporate the new media. After tilling, the beds were crowned for better drainage and raked smooth. For containers, the top 6-8" of media was removed and ¼ teaspoon of Banrot® was sprinkled over the remaining soil and watered in. The containers were then re-filled with the same Grower's Mix media used on the sun beds.

* No endorsement of products named is intended nor is criticism of products not mentioned.

Sanvitalia	14	18

Containers

There were extra containers located in the sun near the University Center for the Arts. These containers were filled by Larimer County Master Gardeners Tomato Trials and AAS Trial plants. There were some extra shade containers as well. Therefore, we planted mixes of five series of begonia from various companies.

Watering Schedule

Plants were watered on an “as needed” basis while in the greenhouses. All plants were thoroughly hand watered after being planted in the garden or in the container. Container trials were irrigated three times a day (depending on rain), every day, for about the first two weeks after planting and then twice a day after that. Each container has 2 drip emitters positioned towards the center that are rated at 1 GPH. All sun containers ran for one hour per cycle and the shade containers ran for 30 minutes per cycle. Beds are zoned according to weekly water-use requirements of 0.5”, 1.0” and 1.5” of water per week, and were watered 2-3 times a week for varying amounts of time starting around July 4, depending on the bed’s water-use rating. Due to some rain this summer, the irrigation was sometimes decreased depending on how much water the individual beds needed.

Bed	Irrigation (in)	Bed	Irrigation (in)
A	0.5”	K	1.0”
B	Drip Irrigation	L	1.0”
C	0.5”	M	1.5”
D	0.5”	N	1.5”
E	0.5”	SA	1.5”
F	0.5”	SB	1.5”
G	1.5”	SC	1.5”
H	1.0”	Shade Containers	Drip Irrigation
I	1.0”	Sun Containers	Drip Irrigation
J	1.0”	UCA Containers	Drip Irrigation

Fertilization in Garden

All beds were top-dressed with Pro Rich® Fertilizer (14-5-5) at the rate of 1 pound N per 1000 square feet prior to planting. Before planting, Osmocote® (14-14-14) was applied to all sun containers at a rate of 130 grams/pot and mixed into the media prior to planting. After planting, Osmocote® (14-14-14) was applied to all shade containers at a rate of 65 grams/pot. Prior to planting, Osmocote® (14-14-14) was applied to all sun beds at the rate of 6.4 grams/sq. ft. (suggested medium rate on label) or approximately 160 grams/variety. Osmocote® (14-14-14) was applied to the shade beds at a rate of 3.2 grams/sq. ft. or approximately 80 grams/variety. Greencare water soluble fertilizer (20-10-20) was dispensed through a 100 GPM Dosatron® twice a week at a rate of 200 ppm during the growing season.

Maintenance of Flowers & Pinching

Greenhouse Maintenance

Genus	Maintenance
Geranium	Deadheaded 4/28

Garden Maintenance

Genus	Maintenance
Geranium	Deadheaded 7/6, 7/26, 8/19
Dahlia	Deadheaded 7/1, 7/23, 8/16

Weed Control

RoundUp® was applied to all beds prior to tilling in the spring, as well as a spot treatment around the containers. Otherwise, all weeding was done by hand throughout the season.

Disease and Insect Control in Garden

Zerotol® was applied as a soil drench prior to planting, on 5/15. In previous years this was done as a preventative measure against *Xanthomonas*. Rootshield® (*Trichoderma harzianum* strain T-22) was applied as a preventative on 6/20. Heritage® (Azoxystrobin), Palladium® (Cyprodinil + Fludioxonil), Bayleton® (Triadimefon) and Mural® (Azoxystrobin + Benzovindiflupyr) were applied to help control *Sclerotinia* approximately every two weeks from early July thru mid August. RootShield® was applied to all sun beds on 6/20. Palladium® was applied to all sun beds 7/6 and 7/8. Heritage® was applied on 7/16 and 8/18. Bayleton® was applied on 7/21 and 7/22. Mural® was applied on 8/16.

Flagship® was applied to Petunias and Calibrachos in containers to treat for aphids on 7/23.

The annual garden has its own supplies and tools in order to reduce the potential spread of disease from other sites.

Monthly Temperatures and Precipitation for Summer 2021

Month	Avg. Maximum Temperature	Avg. Minimum Temperature	Precipitation (Inches)
April	61.4° F	32.4° F	2.15
May	68.5° F	44.0° F	5.52
June	86.4° F	55.2° F	0.48
July	89.0° F	60.1° F	0.65
August	87.2° F	56.9° F	0.64
September	83.4° F	49.9° F	0.56

Data Collection Methods

Plant Size

Height and width measurements were taken twice during the growing season, July 7th, and August 26th. This was done to get a feel for the average size of the plants and each variety's growth performance. For consistency in bed data collection, the third plant from the front of the right row was measured; however, if that plant was noticeably smaller or larger than average on July 7th, an alternate plant was selected for measurement and the location was noted so the same plant would be measured when the second measurements were taken. Measurements were taken at the highest and widest parts of the plant, including any flowers. This may account for the decrease in height on some varieties. For containers, measurements were taken at the highest and widest parts of overall growth.

Flowering Performance

Since 2007, data on the bloom period for each variety has been taken. In presenting this data, we hope to give a feel for how long the plants were in bloom and how well they bloomed during that period of time. Data was collected on a regular basis, every 7-14 days. Plants were evaluated by estimating the overall flowering based on a scale of 1-5, with 5 being in peak bloom and 1 being plants not in bloom or have very few blooms. Full bloom (5) meaning the stage at which the average consumer perceives the plant as being in perfect bloom. One should take into consideration the broad range between these ratings when interpreting these data. If a variety started at full bloom, it means it was already in full bloom in the greenhouse before it was planted. All this data is presented in numerical fashion in this performance evaluation. Towards the end of the season, any dead plants in the trial were not considered in the evaluation: thus, the data given always reflects the percent of live plants in bloom.

Evaluation

The trial evaluation week was held on August 3rd 2021. 93 judges consisting of industry representatives, master gardeners, university employees and trial garden advisory committee members evaluated the plant varieties for performance using a combination of these criteria:

Plant Quality:

- Uniformity of plant habit
- Bushy, well-branched shape versus open and leggy
- Healthy foliage (deep green versus chlorotic, yellow leaves)
- Foliage texture
- Disease resistance

Flower Quality:

- Flower power (number of flowers per plant, substance and holding power)
- Flower presentation (i.e. not hidden by the foliage)
- Color uniformity
- Stable color (resistance to fading) and stable pattern (for bicolor)
- Flower size and uniformity of flowers
- Balance of color in a mixture

Overall Presentation:

- Overall “clean” look, versus visible spent blooms
- Fragrant flowers and/or foliage
- Good vigorous growth
- Resistance to climatic stress
- Novelty value of unique features
- Overall consumer appeal

Plant varieties were rated on a scale of 1 to 5 (1 = very poor performance; 5 = excellent performance). These numerical evaluations were used to calculate the average ratings for each variety in the trials. Participants were encouraged to circle pre-generated comments on the evaluation form, if appropriate, as well as write in any other comments and observations they had. The pre-generated comments they could choose from included: Low vigor, Vigorous plant, Few flowers, Many flowers, Uniform, Non-uniform, Unique color and Some chlorosis. This was the fifth year we enacted a digital evaluation format. Of the 93 evaluators, 64 performed evaluation using the digital format, while 29 used the paper evaluation forms.

Selection of “Best Of” Winners and “Other Outstanding Plants”

Ratings from all evaluators on August 3rd were averaged and the top five in each class were placed on a preliminary list. A class is determined to be any group of plants in the same genus that consisted of 10 or more trial entries. The “Best Of” award was given to classes whose top five list had ratings of at least 4.0 and one of them could be considered superior. A subcommittee of university and industry representatives revisited the garden on September 10th to review the top-five list and verify the superiority of the top-rated varieties later in the season and not just on August 3rd. A majority vote was taken for each class to determine the final selections for winners

“Best Of...” Annuals from 2021 Colorado State University Trials

Best of Show – Rudbeckia Sunbeckia Ophelia from Flamingo Holland/Bull

Gigantic yellow flowers glow in the sun and attracted attention from across the garden. The huge flowers create a near solid canopy of yellow color that creates enormous flower power. Foliage that is visible is very attractive and clean. Plants require no pinching and matures at a nice medium height. The long-lasting flowers keep a fresh look and stay low maintenance by “burying its dead”. Performance was excellent both in ground and containers.

Best Novelty – Heliotropium Augusta® Lavender from Proven Winners

Prolific flowering was sustained throughout the entire growing season. The soft lavender flowers were very showy and had a slight fragrance in the heat of the afternoon. Plants had good uniformity and were a favorite of pollinators.

Best New Variety – Bidens Brazen™ Imperial Luck from Syngenta Flowers

The vigorous plants were densely branched and created a solid mound of flowers across the canopy which created an impressive display of color. Blooms maintained a uniform pattern and had a rich saturated red color that paired well with the dark green foliage. This entry was also very popular among the bees.

"Best Of..." by Class

Angelonia (both container and ground) - Archangel™ Dark Rose from Ball FloraPlant

Noted for excellent performance in both container and ground, it was a standout with a great display of large clusters of flowers and a tall upright growth habit. Plants had good vigor and control for a very uniform appearance which lasted late into the season. The abundant flowers also had a nice dark eye for added interest.

Begonia (container, upright) - BK Collection Vermillion Hot Pink from Beekenkamp

Strong flowering was maintained all season and was very showy with vibrant shade of dusty rose. Dark foliage helped make the flower color “pop” but double petals and prolific blooming provided a lot of color to a shady location. Foliage was clean and flowers were self-cleaning to keep a fresh appearance with low maintenance.

Begonia (container, seed) - Nonstop® Joy – Orange from Benary

Vibrant orange flowers never faded and created a nonstop display of color all season. Flowers were huge and beautiful with the radiant orange color. Entire series received high marks from the evaluators. Trailing growth habit would work well in containers, and it was also reported to grow well in partial sun as well as shade.

Begonia (container, trailing) – Shine Bright White from Westhoff

Vigorous plants cascaded over the sides of the containers with elongated white flowers for a nice combination of color and unique texture. Growth habit was very uniform.

Begonia (Rex) - Jurassic™ Pink Splash from Ball Ingenuity

Great foliage provided a lot of interest all season even without flowers. Pink shades flow down along the center of the leaf with a very nice silver and green on the outer leaf. The large leaf size and unique colors stands out from many other garden plants. Plants had good vigor and uniformity.

Begonia (wax, ground) - Tophat™ Rose Bicolor from Syngenta Flowers

Considered by some as the “best bicolor wax begonia ever”, the huge flowers were excellent basis for that claim. The white and rose flowers were really quite enormous and prolific. The plants in general also had great vigor, uniformity and were well branched.

Bidens – Brazen™ Imperial Luck from Syngenta Flowers

The vigorous plants were densely branched and created a solid mound of flowers across the canopy which created an impressive display of color. Blooms maintained a uniform pattern and had a rich saturated red color that paired well with the dark green foliage. This entry was also very popular among the bees.

Calibrachoa - Cabaret® Good Night Kiss from Ball FloraPlant

Flowers were stunning with a bright pink/purple outer flowers with a very dark center and a yellow throat. The intense color is made even more vivid against the dark green foliage. Plants were dense with a nice uniform, mounding growth habit.

Coleus - Main Street Orchard Road from Dummen Orange

Plants had good vigor and maintained a consistent growth habit all season. Foliage color was an attractive bicolor of different shade of red in the main leaf blade and a nice contrasting pinstripe of bright green along the outer edge. Flowering was nonexistent until a few late in the season but was still very attractive overall.

Combination - Kwik Kombos™ Blue Lightning™ Mix Imp. from Syngenta Flowers

Dark blue scaevola and bright golden lantana were mixed together for a very effective contrast between light and dark. The plants made good combination that had both good heat tolerance and prolific flowers all season.

Dahlia - City Lights™ Purple from Selecta One

This was a favorite plant from the voting on Consumer Day as well as the industry evaluation due to the abundant rich, dark purple flowers and dark foliage. The consistent appearance was a reason for it being a repeat winner from 2020. Plants were uniform in habit and maintained a fresh appearance by burying its dead.

Geranium (container) - Mojo™ White from Syngenta Flowers

Clean, white flowers stood out against dark green foliage for maximum color contrast. Abundant flowers and the large size made a very attractive presentation. Plants were both vigorous and uniform with clean foliage.

Geranium (ground, Interspecific) - Calliope® Large Orange Splash from Syngenta Flowers

Floriferous plants had huge flowers with vibrant color that created a immense amount of flower power. Color was not a true orange but more of a unique watermelon shade with a darker splash of color in the center of the petal. Flowers were noted to be long lasting for a greater period of show.

Geranium (ground, Zonal) - Galaxy™ Violet from Ball FloraPlant

Plants had good uniformity and vigor. Flower power was excellent with abundant blooms that kept a vibrant violet color without any fading. Plants were tall and were true zonal geraniums with distinct markings on the foliage.

Impatiens - Beacon® Rose from PanAmerican Seed

Clear rose-colored flowers brighten the shady spots with their abundant blooms. Growth habit was very uniform, and plants had excellent vigor. Full plants had the added advantage of being disease resistant to Downy Mildew disease which can be devastating to many impatiens.

Impatiens (vegetative, sun) - SunPatians® Compact Deep Red from Sakata Seed America

Large, rich red flowers sat just above the dark foliage for maximum flower power. Plants had a very nice mounded growth habit and great vigor in full sun. They would also work well in a combination with other plants.

Lantana - Hot Blooded® Red from Syngenta Flowers

Blooms had a good rich saturated red color with a touch of orange. Plants maintained a compact and uniform growth habit compared to many other red lantanas. The vibrant red flowers made a good choice for hot locations with minimal water demands.

Lobelia – Hot Waterblue from Westhoff

Plants were noted for incredible vigor and impressive heat tolerance that made it an obvious standout from the other Lobelia even in September. Even late in the season, plants had nice green foliage and an abundance of sky-blue flowers. Growth habit was very uniform as well.

Marigold – Marvel II™ Gold from Pan American Seed

Floriferous plants looked good all summer and even late into the season. The dark green foliage, consistent bloom and uniform growth habit created an excellent overall appearance.

New Guinea Impatiens (shade) - Sonic® Orange from Syngenta

Large flowers were very bright for lots of color in the shade, but they can also tolerate partial sun as well. Flowers seemed to sparkle on the compact plants which had good vigor and nice uniformity.

Osteospermum - Gelato Prune from Westhoff

Plants had good flower power even during the heat of the summer. Flowers were very large and a nice shade of dark purple. Overall, the growth habit was uniform and the foliage had a nice green color. The entire “Gelato” series was noted for ranking very high with placing 4 plants in the top 5 rankings.

Petunia (container, vegetative) - Bee's Knees from Ball FloraPlant

Bright yellow flowers covered the plants for impressive flower power in both containers and the ground. Plants had good vigor and maintained a nice growth habit in the ground or trailed over the container without opening up in the middle. The two-toned yellow flowers had proven a dependable performer over the past years and are a repeat winner.

Petunia (ground, seed) - E3 Easy Wave™ Blue from PanAmerican Seed

Vibrant purple/blue flowers provided a blanket of color in the ground with spreading plants and abundant flowering. Besides having good landscape performance, plants were also noted for desirable grower features such as being early to flower and the need for less plant growth regulators.

Petunia (ground, vegetative) - Supertunia Vista® Bubblegum® from Proven Winners

This annual has become a perennial favorite as it has been a winner over several years. It has become the standard that many other varieties have difficulty matching. Plants had incredible vigor and were covered in bright pink blooms that made it easy to spot even from a long distance in the landscape.

Portulaca (container) – Mega Pazzaz™ Purple from Danziger

Intense violet flowers were abundant and held close to foliage to keep a very compact and uniform growth habit. Blooms were single and were very popular with the bees. It was very tolerant of the summer heat and looked great all season.

Portulaca (ground, seed) – Sundial Pink from Benary Plus

Vigorous plants did well in the ground, and they maintained a consistent growth habit with a uniform appearance. Double flowers made it very showy, and it was very popular with the bees.

Rudbeckia - Sunbeckia Ophelia from Flamingo Holland/Bull

This spectacular plant was also selected the “Best of Show” winner for 2021. Gigantic yellow flowers glow in the sun and attracted attention from across the garden. The huge flowers created a near solid canopy of yellow color that created enormous flower power. Foliage that was visible is very attractive and clean. Plants required no pinching and matured at a nice medium height. The long-lasting flowers kept a fresh look and stayed low maintenance by “burying its dead”. Performance was excellent both in ground and containers.

Scaevola - Indigo Touch™ from Danziger

Plants had plenty of “Wow” factor with the large amount of flowers and an amazing, intense blue color. Flowering was prolific and it was maintained all throughout the season. The growth habit was upright, mounding and very uniform.

Verbena (container) – Lanai® Upright Twister™ Watercolor from Syngenta Flowers

Flowers had a unique combination of soft lilac pink with darker shades in the middle. Plants looked good in containers with strong vigor and an upright mounded growth habit that did not open up over the entire season.

Verbena (ground) - EnduraScape™ Pink Bicolor from Ball FloraPlant

Light and dark shades of pink created a very attractive flower and combined with a large, spreading plant made it a great display of color. The uniform habit and great vigor made a good choice for the landscape. It was a good plant for the variability of the long season with good heat tolerance in the middle of summer and good cold tolerance as fall approaches.

Vinca - Soiree Kawaii Coral Reef from Suntory Flowers

Prolific, small pink flowers created a very delicate appearance but maintained a lot of flower power all season. The small pink flowers also had a white eye for added interest and plant did well in both the ground and containers. Plants had nice vigor and good uniformity.

Zinnia - Profusion Red Yellow Bicolor from Sakata Seed America

Flowers were very unique in that the color starts out as a bright red center with golden yellow on the outer petals orange then fade to shades of beautiful apricot and dusty rose. It was a showstopper and a fun plant to watch as flower color changes. Plants were compact and very floriferous.

Other Outstanding Plants

Jamesbrittenia Safari™ Dawn from Proven Winners

Prolific flowering was one of the traits that made this entry stand out along with the gorgeous flower colors of soft apricot to rose that changed as it matured. Plants were vigorous and almost enveloped the container in flowers by the end of the summer. Growth habit was uniform, and the plant was heat tolerant. It was considered a breakthrough in Jamesbrittenia.

Marigold – Panda Yellow from JYK Seed Co.

Full, double flowers topped the sturdy and uniform plants which created a very good display over the entire season. Plants were medium height and had good dark green foliage. There was no lodging even with overhead irrigation.

For a more complete report and photos of all these winners go to www.flowertrials.colostate.edu.

For further information about the Colorado State University Annual Flower Trials, contact Jim Klett at Jim.Klett@ColoState.edu or phone 970-218-0104.

Consumer's Top-Rated Plants

This was the fourth year that we included a digital evaluation of on our garden for garden visitors to vote for their favorite plants. This new feature was very popular with the public garden visitors. This year we had about 650 visitors submit digital and physical votes. The top consumer voted plants are as follows:

Variety Name	Company
Petunia Starlet™ Midnight Sky	Selecta One
Dahlia LaBella Grande Fun DAMX 3715 Red-White	Beekenkamp
Dahlia City Lights™ Purple	Selecta One
Dahlia Megaboom Fire	Dummen Orange
Dahlia LaBella Maggiore Purple	Beekenkamp
Rudbeckia Sunbeckia Luna	Flamingo Holland/Bull
Dahlia Lubega Dark Red Glow	Benary Plus
Dahlia Venti™ Passion Fruit	Selecta One
Dahlia Dahlegria™ Red	Syngenta Flowers
Coleus Main Street Orchard Road	Dummen Orange
