DIRECTOR'S REMARKS

The 2025 CSU Trials are in the books. We had significant color extending all the way into the end of October! The 2025 summer was warm and dry for much of July, which necessitated a few extra irrigation cycles. The Fort Collins area was under drought to moderate drought conditions for several periods over the last year. Like in previous years, Japanese beetles are one of our major pest problems. We did note a bit more root rot problems this year in a couple 'hot spots'. We conducted our first tours and consumer favorite voting for the Perennial Trials this year, as a part of our Public Evaluation Day. It was a success and plan to continue with those activities in subsequent years. Colten Davis, the undergraduate who oversaw day to day activities, did a fantastic job with the gardens--many compliments were received for his efforts!

We had 26 companies participate in this season's trials, entering 127 new entries of herbaceous perennials. We are evaluating a total of 287 entries currently planted for evaluation in the perennial beds. Plants were evaluated for several growth parameters and data were collected every two weeks from ~May through September. Entries were also evaluated by some members of the Perennial Trial Subcommittee. The subcommittee met on November 21, 2025 to review data and photos for plants entered in 2023. The committee evaluated 26 of the top rated 2023 entries and selected 9 as 2025 "Top Performers." A "Top Performer" exhibits nearly 100% survival after two winters/three growing seasons and received high ratings for different plant growth parameters.

You are cordially invited to visit the gardens at your leisure and enjoy the color and ambiance of a place that is like no other in Colorado. Please feel free to contact us with your feedback.

CHAD MILLER, PH.D.
Trial Garden Director
Associate Professor of Landscape Horticulture
chad.miller@colostate.edu

TRIAL GARDEN MISSION AND PURPOSE

Our mission is to provide education, research and outreach to students, community members, industry professionals and anyone else with a desire to learn.

The purpose of the flower trial garden is to evaluate the performance of flower varieties under our unique Rocky Mountain environmental conditions. Our growing conditions are characterized by high altitude (~5,000 ft), intense solar radiation, drying winds, severe hailstorms, large fluctuations between day and night temperatures, season-long need for irrigation and heavy clay soils. Plants are evaluated based on plant vigor, uniformity, floriferousness and tolerance to environmental and biotic stresses. Performances of these varieties are judged by selected students, faculty, industry representatives, public horticulturalists and advanced Master Gardeners.

A summary of these evaluations is published in this Trial Performance Report at the end of the season so that the information can be used by the horticulture industry and the public. This report will be distributed to all participating companies and these results will also be available to the public online at www.flowertrials.colostate.edu.

2025 CSU TRIAL GARDENS CREW

**Thank you to the following folks who made the
CSU Trial Gardens a success this year!**

David Staats Horticulture Research Associate

Ashlyn Schall Undergraduate & Annual Trial Garden Coordinator

Cassie Kargol Undergraduate Student & Trial Garden Assistant

Carter Lovett Undergraduate Student & Trial Garden Assistant

Colten Davis Undergraduate Student & Perennial Trial Garden
Coordinator

Vashti Lay Undergraduate Student & Perennial Demonstration
Garden Coordinator

Tayte Sall Undergraduate Student & Plant Select Demonstration
Garden Coordinator

Joseph DelConte Undergraduate Intern (Cornell University)

Larimer County Master Gardeners for many hours of volunteer time

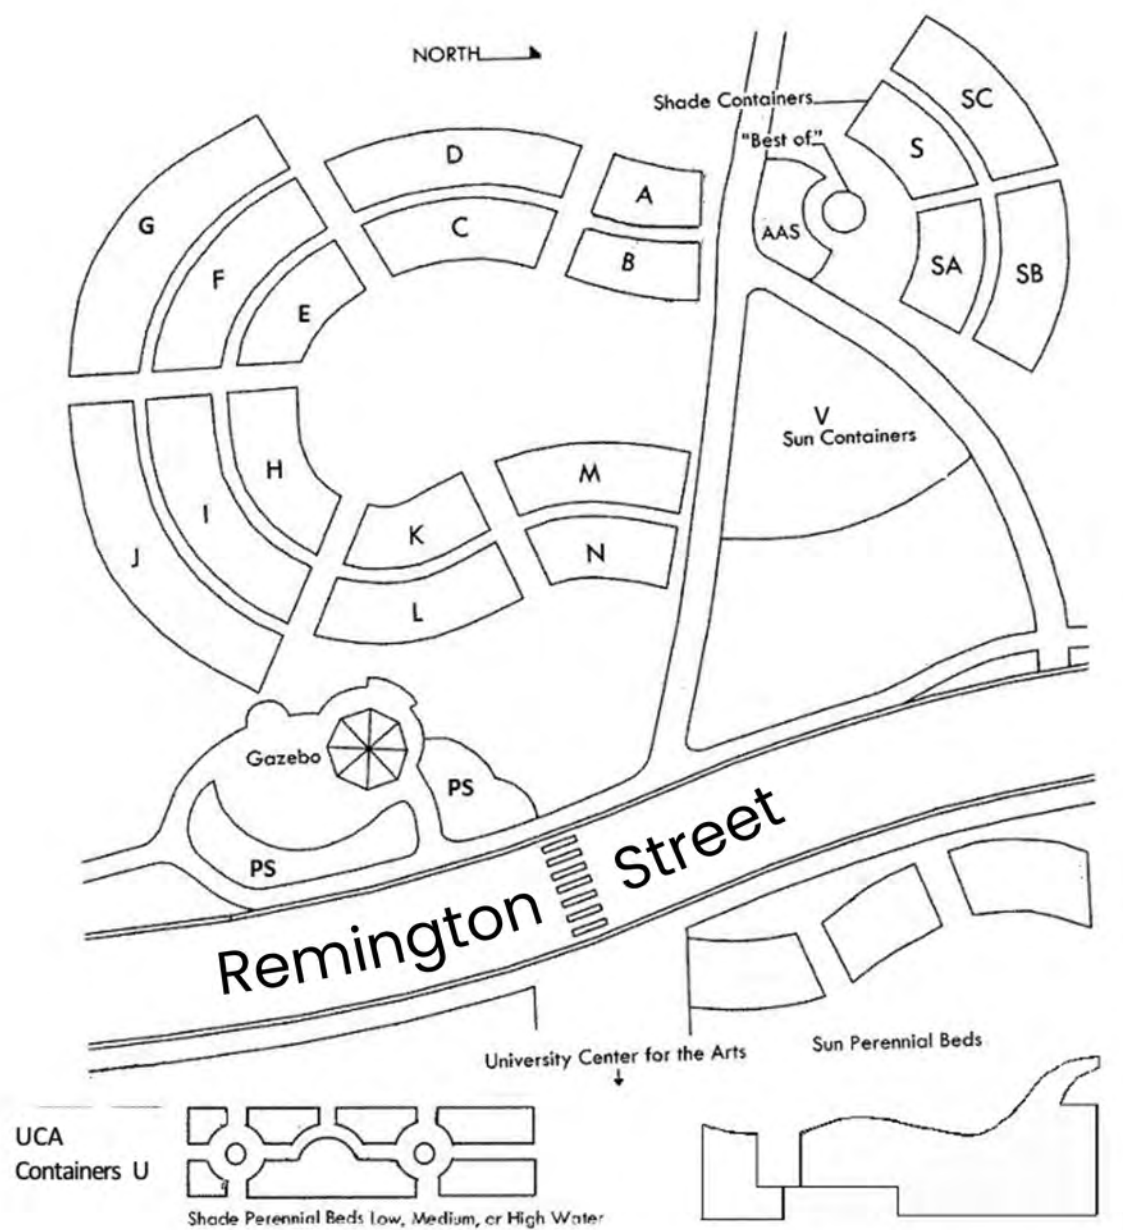

Also, Thank You to all those that serve on our Advisory Board!

Left to Right: Colten Davis, David Staats, Cassie Kargol (front), Joseph Delconte (Back), Bev Shaw, Chad Miller, Carter Lovett, Ashlyn Schall, Vashti Lay, Tayte Sall

CSU TRIAL GARDENS MAP

Perennial Trial Bed are located on the east side of Remington Street.

2025 PERENNIAL TRIALS SUMMARY

By the Numbers...

Participating Companies: 26

Number of genera represented: 84

Total Perennial Trial Entries Under Evaluation in 2025: 287

Entries from 2023: 55

Entries from 2024: 105

Entries from 2025: 127

Student Employees Allocated to Perennial Trials

Spring (part-time; 10-20 hours/week): 1

Summer (full-time; 40 hours/week): 1

Fall (part-time; 10-20 hours/week): 1

Trial Garden Advisory Perennial Trial Subcommittee

Members:

Bridget Blomquist; Dan Gerace; Beth Gulley; Kathy McKay; Sean Moody; Gene Pielin; Diana Reavis; Bev Shaw; Susan Stauber; David Staats; Jim Klett; Chad Miller

CULTURAL INFORMATION

GREENHOUSE CULTURING

Plants Grown at CSU Horticulture Center Greenhouses

Plant Entry Details

Seed Entries

- Seed delivered to CSU and then distributed to Blooma Farms and Kiyota Greenhouses delivered in January and February.
- All varieties of same genus grown at one location.
- Seed entries delivered to CSU Horticulture Center (June) WK 23.

Vegetative Entries

- Plugs or liners received at CSU March (WK 10) to mid-April (WK 16).

Fertilization

- Fertigated: 200 ppm N of 14-4-14 (GreenCare and Harrell's brands)
- Applied using Dosatron® injector (7 gpm)
- Clear water on weekend or as needed.

Pest Control

Biological Control

We implemented biological control for pest management for most of the growing season, up until WK 20. Species implemented were *Aphidus colemani*, *Orius insidiosus*, and *Dalotia coriaria*.

Chemical Treatments

- Banrot® Drench and Rootshield® applications to all plugs and liners upon arrival, before transplanting.
- Xxpire® application (aphids) May 16, 2025
- Pageant® application (thrips) May 16, 2025

No endorsement or criticism of products mentioned or not mentioned intended.

CULTURAL INFORMATION

GARDEN BEDS

Soil Preparation and Amendments

- Planting plots raked clean of old plant material and weeds
- Grower's Mix Media (Organix Supply, Inc.) was added to some planting plots to level planting plots.

Planting Dates

- Perennials were planted between WK 21 and WK 23 2025.

Planting Methods

- Plants were trialed under full sun or shade conditions. Shade was provided from large broadleaf trees (~60–75% shading).
- Between 6 and 12 replications were planted. Replications varied based on plot space availability, plants supplied, and species.
- Plants were spaced on ~12" centers, on average, depending on species.

Irrigation

- Immediately hand-watered after transplant.
- Planting beds watered between 1.0" and 1.5" per week.
- Planting beds typically watered between 2 and 3 times per week.
- Irrigation was adjusted reduced based on rain events or increased based on increased high temperatures.

Fertilization

Pre-plant

Planting beds

- Top-dressed Pro-Rich 14-5-5 : 1 lb N per 1000 per sq. ft
- Osmocote® 14-4-14 : 6.4 g per sq. ft. (sun)

Post-plant

- Fertigated 200 ppm N; Harrell's 20-10-20, twice weekly (June)
- Fertigated 200 ppm N; Harrell's 14-4-14, twice weekly (July-Sept.)

CULTURAL INFORMATION

Planting Bed Analyses

pH	E.C. (mmho/cm)	Lime Estimate	Organic Matter (%)
7.1	1.67	Low	15.0

NO3-N	P	K	Zn	Fe	Mn	Cu
75.5	0.5	845	0.10	0.30	5.55	0.1

Elements are reported in PPM. Analysis conducted in 2022.

Garden Maintenance and Pest Management

Deadheading

All flowers deadheaded as needed to give a clean appearance and encourage secondary blooming.

In winter, dead plant material cut back to ground level.

Insect Control

Sevin applied on July 24 to *Anemone* for blister beetles.

Disease Control

Palladium® fungicide applied on July 7, 10, and 23 to *Caryopteris* and *Salvia*.

Mural® fungicide applied on August 11 to *Caryopteris*.

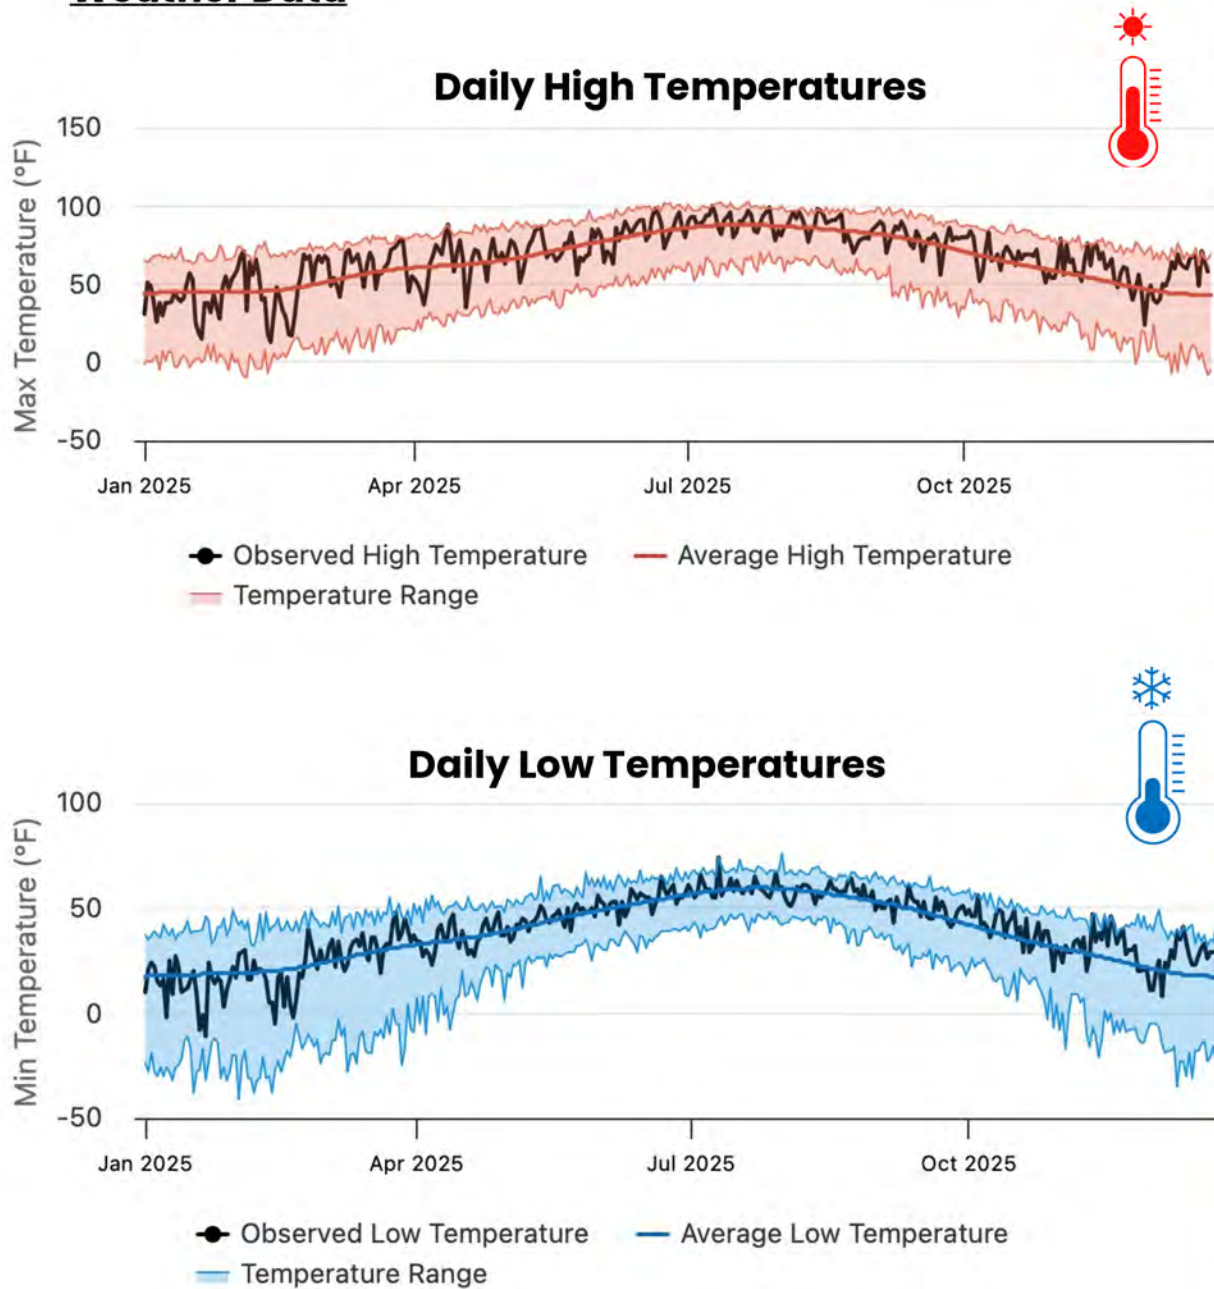

Weed Control

Hand weeding on weekly basis. RoundUp® spot treatment as needed.

PLANT EVALUATION

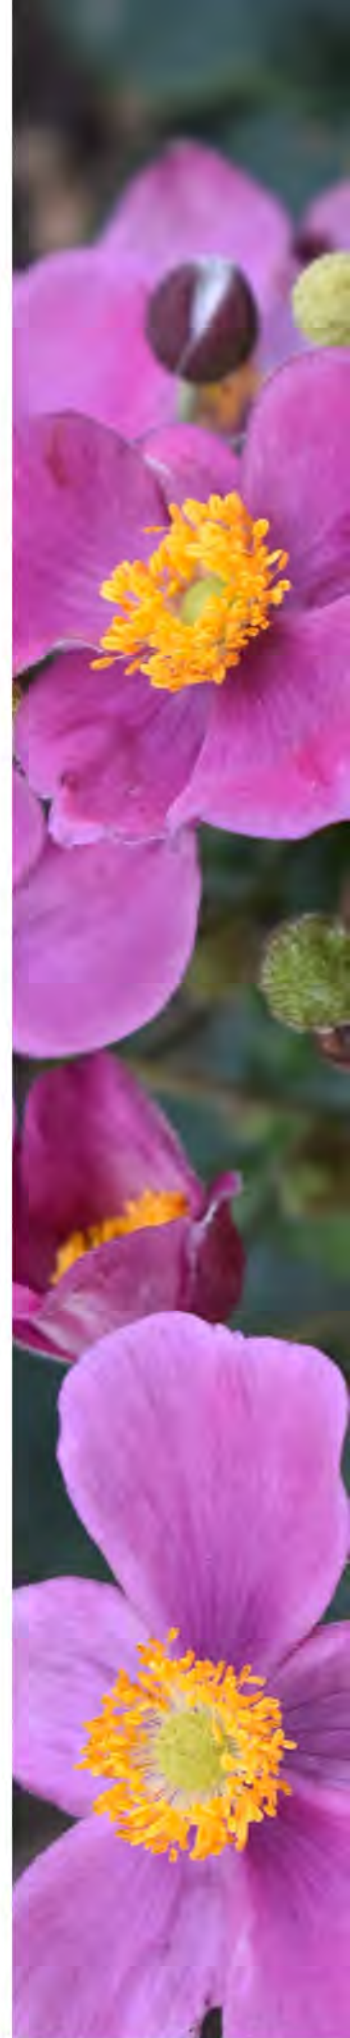

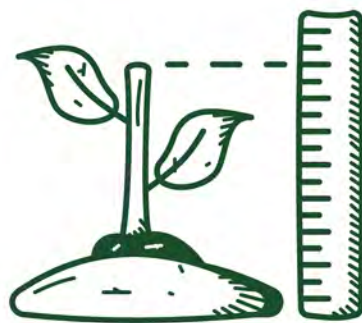

Data Collection and Methods

- A representative plant from trial plot was selected for data collection.
- For consistency--typically the third plant from front. If the third plant was not 'representative' (i.e., extremely smaller or larger, or dead), an alternative plant was selected for measurement.

Plant Stature Data Collections: Collected late in growing season (~September) to capture 'mature' plant size.

- **Plant Height:** measured from ground to tallest part of plant (including flowering stems).
- **Plant Width:** two measurements averaged from one measurement of widest and one perpendicular to the first measurement.

Photo Data Collected: Photo data are collected on a ~bi-weekly basis from ~mid-March to early October. Photos taken include plant plots, whole plants, and flower close-ups. Photos are labeled and available to view on the [CSU Trial Website](#).

PLANT EVALUATION

Plant Performance and Evaluation

- In addition to the data collection described above, plant performance and evaluations are conducted through the growing season (~June, July, August, and September). Rating scale below.
- Evaluators also provide additional comments and observations for entries for consideration.
- Evaluators include the student coordinator, trial garden director, research associate, along with members from the Perennial Trial subcommittee.

Plant Growth and Flowering rated using the following scale and criteria

Rating Scale	Plant Growth	Flowering
0 (Dead)	Dead	Dead
1 (Poor)	Plants very sick or dying	Extremely few flowers
2 (Below Average)	Plants unattractive in some form (i.e. – leggy growth habit, chlorotic or low vigor)	Flowers are few and sporadic
3 (Average)	Plant appearance with growth characteristics that would be expected for the time of season	Flowers would be few but <u>uniform</u> across the plants
4 (Good)	Plants look attractive (foliage, growth habit, etc.)	Flowers are blooming strong and showy
5 (Excellent)	Plants very healthy and uniform	Flowering is impressive

PLANT EVALUATION

Plant Performance and Evaluation

- Additional plant ratings and evaluation parameters include:
 - **Plant form and quality** including *vigor, uniformity, foliage health, branching, sturdiness, etc.*
 - **Flowering** including *size, uniformity, flower presentation, flowering capacity, color stability, color balance in mixed plantings, etc.*
 - Other considerations including *fragrance (flowers or foliage), disease/pest damage, novelty, etc.*
- The above evaluation parameters factor into an **Overall Rating** (1 = very poor performance; 5 = excellent)

Top Performer Winners

“Top Performer” Selections

- Perennial Trial Subcommittee from the Trial Advisory Board met virtually on November 21, 2025.
- 72 entries were planted in 2023 and 26 were evaluated by the subcommittee. Data summaries and photos from the previous three growing seasons were evaluated. The committee then voted for top performing plants.
- Criteria defining a CSU ‘Top Performer’ includes significantly high survival percentages after two winters and three growing seasons (~80% or higher) and high average scores (~3.5 or higher) over the three growing seasons.
- 9 perennials were voted as a ‘Top Performer’ for 2025.

2025 TOP PERFORMER PERENNIALS

COLORADO STATE UNIVERSITY

'HONEYCOMB' **BLUE GRAMA GRASS** **(*BOUTELOUA GRACILIS*)**

Intrinsic Perennial Gardens

This ornamental blue grama grass can light up the landscape with its prolific, warm earthy-honey-yellow flower heads that gracefully dance above the foliage and catch the early morning and late afternoon sun. Great clump forming grass grows about 24" tall and makes a statement as a mass planting. This grass is tidy, compact, and drought tolerant. Also provides great winter interest opportunities in the landscape. A great alternative to 'Blonde Ambition' for cold hardiness and soils that might retain a bit more winter moisture.

2025 TOP PERFORMER PERENNIALS

COLORADO STATE UNIVERSITY

'CRAZY BLUE' RUSSIAN SAGE (*SALVIA YANGII*)

Darwin Perennials

Back again! A winner back in 2021. With a lot of Russian sage options on the market, this one still stands out! This sage lives up to its name—copious amounts of intense, crazy blue-purple flowers for several weeks adorn the stems! This shorter, upright selection, grows to about 30" tall with interlocking branches so it does not break open. The characteristic, blue-gray-green dissect foliage makes this a great selection that is well adapted to drier landscape situations—and it is a pollinator magnet! (Also known as *Perovskia atriplicifolia*.)

2025 TOP PERFORMER PERENNIALS

COLORADO STATE UNIVERSITY

ROCK 'N GROW® 'MIDNIGHT VELVET' STONECROP (*SEDUM* HYBRID)

Proven Winners and
Walters Gardens

Let the good times roll with this sedum! 'Midnight Velvet' is a sturdy moderately sized upright sedum, with deep, purple-burgundy velvet looking foliage, from the initial spring growth, all the way to the end of the season. Full sun all the way for the best foliage color! By mid-summer, mauve-pink flower buds appear, giving way to rich rosy-red flowers—a pollinator favorite! Great plant for dry landscapes or that spot in the garden that doesn't get much irrigation. This Rock 'N Grow is a perfect fit for the landscape if you're looking for a sedum that isn't hugging the ground, and not as tall and bulky as an 'Autumn Joy'.

2025 TOP PERFORMER PERENNIALS

COLORADO STATE UNIVERSITY

'SALUTE® NEON PINK' MEADOW SAGE (*SALVIA NEMOROSA*)

Dümmen Orange

This salvia was a literal bright spot in the landscape! The stunning, prolific rich, neon pink flowers borne on darker pink, almost mahogany spires caught the eyes of many garden visitors. And the pollinators! This uniform growing perennial reaches about 18" tall and great for the perennial border or for massing to make an even bigger impact. With a little extra maintenance and deadheading, you can expect some reliable reblooming throughout the latter part of the summer and into early fall! Passerbys will definitely stop and salute this garden sage!

2025 TOP PERFORMER PERENNIALS

COLORADO STATE UNIVERSITY

LUMINARY® 'PRISMATIC PINK'

**GARDEN PHLOX
(*PHLOX PANICULATA*)**

Proven Winners® and
Walters Gardens

Let's cut to the chase...This phlox showed no powdery mildew in our trials! The intense pink panicles were robust and held on strong stems, maxing out around 18 to 24" by late summer and into early fall, putting on a good show for several weeks. Nice medium dark green clean foliage on straight stems! No doubt, 'Prismatic Pink' can illuminate the late summer perennial border!

2025 TOP PERFORMER PERENNIALS

Colorado State University

'DAZZLE ROCKS' SEA LAVENDER (*LIMONIUM GMELLINII*)

Eason Horticulture and
Creekhill Nursery

Yes...a statice! So, what's so dazzling about 'Dazzle Rocks' you ask? Let's go through the checklist: Drought Tolerant and adaptable to low water inputs. Check. Long lasting rich, purple color. Check. Deer and rabbit resistant. Check. Great cut flower. Check. Interesting texture and form from the inflorescences. Check. Definitely an underused and underappreciated genus that deserves some more attention! This perennial is definitely one of those that might be a bit slow in the first year, but by the third year, is making a great show—especially with an ideal time when many of our summer flowering perennials have just put on their show. This could make a spectacular matrix planting with 'Honeycomb' blue grama grass!

2025 TOP PERFORMER PERENNIALS

Colorado State University

SHOWMAKERS® 'BLUE BAYOU' ASTER (*ASTER NOVI-BELGII*)

Van Zanten Breeding B.V.

Impressive and bold. This aster sports slightly larger inflorescences and flowers than many other asters on the market—a bit larger than the size of a quarter. The intense, deep blue-purple color catches your eyes from across the garden—and flowers LATE into the season. We observed decent color on these plants well into late October and November! Stems are sturdy and upright, and if kept dry, powdery mildew is minor, if any at all. A great consideration for a fall container planting and display!

2025 TOP PERFORMER PERENNIALS

Colorado State University

'PERMA FROST' **SIBERIAN BUGLOSS** (*BRUNNERA MACROPHYLLA*)

Darwin Perennials

This perennial also checks off the boxes for many of our garden design plantings and interests. It is deer and rabbit resistant. It is quite drought tolerant, thus makes it an ideal candidate for a dry shade situation! Plus, it does show more heat tolerance than other Brunnera, so there's less leaf-edge browning—making for a very clean foliage presentation. AND...not to overlook the bright, baby blue flowers in early spring that dance above the silver-white and green veined heart-shaped foliage! Plant some 'Perma Frost' for some permanent shade interest in your garden!

2025 TOP PERFORMER PERENNIALS

Colorado State University

'BLUE RIBBONS' **WOODLAND PHLOX** **(*PHLOX DIVARICATA*)**

Eason Horticulture and
Creekhill Nursery

How about a spreading phlox that gives good bang for the buck and is a native! This ~8" to 10" tall groundcover type plant not only erupts in a show of light, violet-blue slightly fragrant flowers in very early spring, but sports semi-evergreen variegated foliage, of a creamy-white. And in the colder and winter months, the foliage takes on a reddish hue to the variegation. This is a great semi-shade plant, that does well with morning sun and afternoon shade. It is also can adapt to slightly drier soil conditions. A great A blue-ribbon winner for sure!
